WELCOME BUDDY 120!

A larger size for more possibilities. 120*60mm are the new dimensions of the marking window available for the Buddy machine. Already considered a must-have in its 60 version, the XL one is likely to be a success!

But, what exactly is Buddy? It's the latest addition to Technomark's Connect.series range (electromagnetic dot peen machine) designed to meet the need for 100% nomadic use. Available since the end of 2022 in size 60, it's now available in size 120 since the beginning of 2024.

The operator can move around freely thanks to its always-ready smartphone, which acts as a control unit. If necessary, he can still mark within a 10 meters radius between the head and the smartphone. The user can now mark in both indoor and outdoor environment, without any limits.

Submitted to license, the smartphone application developed by Technomark is compatible with Android 10+ and is available on Google Play. Its intuitive user experience allows to create, set and launch markings quickly and easily with the smartphone. In terms of connectivity, the head communicates with the smartphone with a secured Wifi protocol and the application allows real time marking data and maintenance feedbacks.

The embedded technology content in the Connect.series marking head is still the same and makes it as performing as ever. To note, a weight of 7.05lbs for this new model, only 0.88lbs more than the 60 version. **Whether in 60 or 120 version, Buddy really has everything to please to users.**
